NotI; An unidirectional cDNA library generated from [Apical meristem and tissues surrounding of immature plants]. CDNA was prepared from polyA+ mRNA using SuperScript plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-28 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"

The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"

//LIDIALITE TANA / Apical meristem and tissues surrounding of immature plants; Vector: pSport1; Site_1: Sal1; Site_2: Not1; An unidirectional cDNA library generated from [Apical meristem and tissues surrounding of immature plants]. cDNA was prepared from polyA+ mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"

/note="Vector: pWE18S-FL3; Site_1: XhoI; Site_2: XhoI; The
library was prepared from poly4+ RNA from seedlings grown
in hydroponic culture. At 8 days of age, medium was
supplemented with 0.5 mM 1-aminocyclopropane-1-carboxylic
acid (ACC) to induce endogenous ethylene (ETH) production.
Roots and shoots were harvested after 27 and 72 hr and
material from both time points was combined prior to RNA
isolation. Double-stranded cDNA was cloned
unidirectionally into different Drall sites of the
pWE18S-FL3 vector (5-prime Drall site is CACTGTCTG,
3-prime_Drall site is CACCATGTG). XhoI excises the cDNA
                                                                                                                                                   Email: mmpratt@uga.edu
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; plant material and RNA prepared at Texas A & W University,
sequencing done in the Laboratory for Genomics and Bioinformatics,
University of Georgia. Sequence ends have been trimmed to exclude
vector and regions below Phred quality 16. Three-prime sequences
are presented as their reverse complement and have been trimmed to
exclude polyA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            АМЬВИОЗВ 696 bp mRNA linear EST 19-JUL-2000

/note=_organ: Leaf roll from field grown adult plants
(large insert library); Vector: pSport1; Site 1: Sal1;
Site 2: Not1; An unddirectional cDNA library generated
from [Leaf rol] from field grown adult plants (large
insert library)]. cDNA was prepared from polyA+ mRNA
using SuperScript Plasmid System Kit (Invitrogen). The
double-strand cDNAs were fractionated in a sepharose
CL-2B 40cm-columns and fragments sizing between 0.8 and
1.5 KD were directionally cloned into the vector. Details
of each source of RNA and library construction can be
obtained at http://sucest.lad.ic.unicamp.br/public"

/clone lib="Exelizis P element XP insertions"
/note="Vector: P element XP (GenBank accession number
AY31519), An isogenic w- Drosophila melanogaster strain
was mutagenized by remobilization of transposable
elements. For the P element XP, we selected an easily
mobilized ammunition element among inserts hopped onto the
Binsinscy balancer. New insertions were collected in vials
from dysgenic females using the standard chromosomal
source of transposase, delta2-3. All lines were mapped to
a chromosome by standard genetic methods, examined for
homozygous viability and used for recovery of flanking
genomic sequence by inverse PCR."

/lab host="DH108"
/clone lib="LR1"
/clone lib="Lag"
/clone libert library); Vector: pSport1; Site_1: SalI;
Site_2: NotI; An unidirectional cDNA library generated
from [Leaf roll from field grown adult plants (large
insert library)]. cDNA was prepared from polyA+ mRNA
using SuperScript labsmid System Kit (Invitrogen). The
double-strand cDNAs were fractionated in a sepharose
CL-28 40cm-collumns and fragments sizing between 0.8 and
1.5 Kb were directionally cloned into the vector. Details
of each source of RNA and library construction can be
obtained at http://sucest.lad.ic.unicamp.br/public"

Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated. The resulting Poly-T sequence has been removed. High quality sequence stop: 503 PolYA-Yes.
